

## quickParent User Guide

The quick Parent App is accessed via a cellphone. It is compatible with both Android and Apple phones. The app can be downloaded and installed from the respective “App Stores” on each device.

For Android phones the process is as follows:  
Open the PlayStore and type Quick Parent into the search bar at the top of the screen and choose the quickParent App with the icon.

Then click Install. When the install is completed you will see the screen below and can click “Open”

You will be presented with the login screen for QuickParent. Enter the login details provided to you by the school (If you have children at more than one school your login details will be the same as the app finds your children automatically, and connects them to you in a single App. You do not need a different app for each school):

Test Ad  
Nice job!

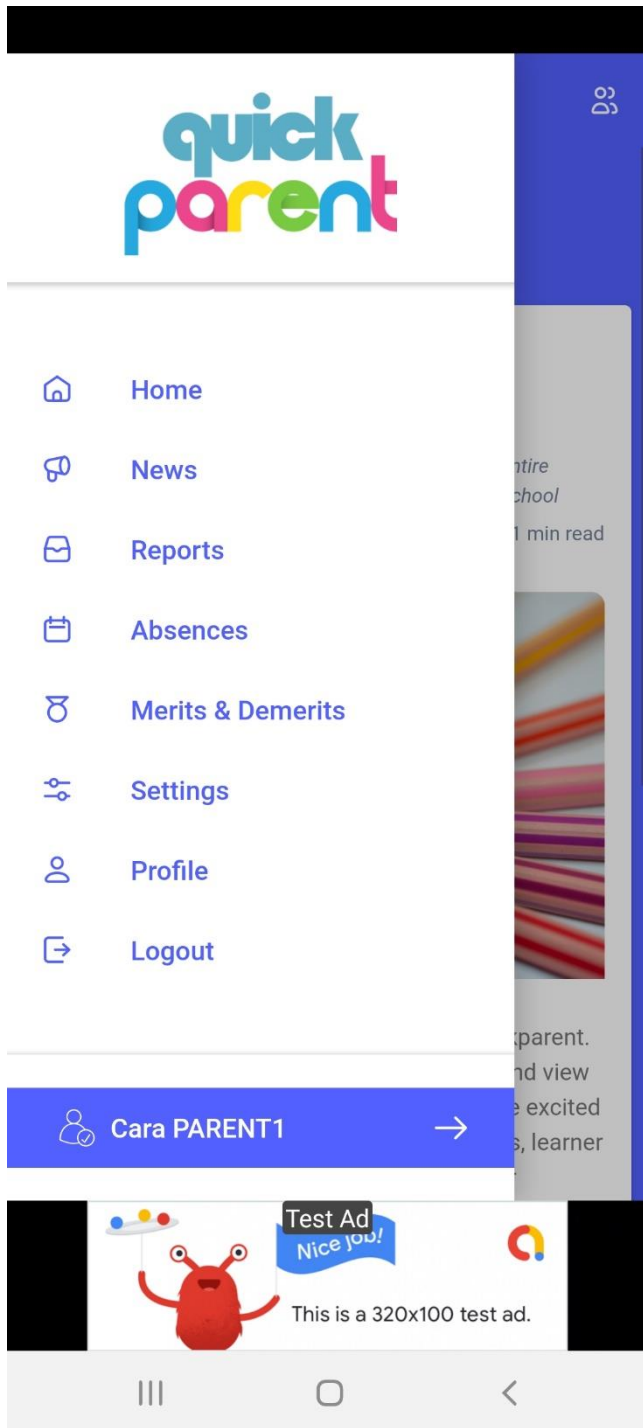

This is a 320x100 test ad.

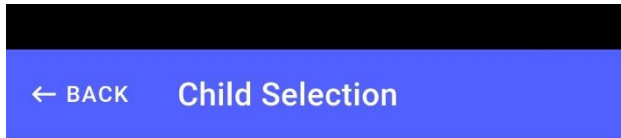

Once you have successfully logged in you will see the screen on the left:

On this screen you will see the latest news published by the school as well as the phone number of the school and the email address of the school. This is useful if you need to contact the school and can't remember the contact details 😊 .

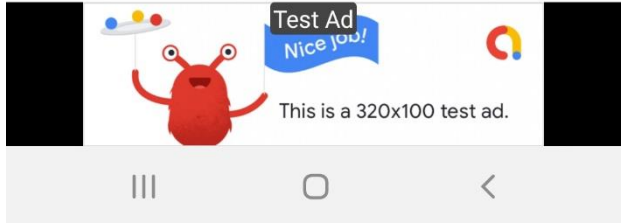

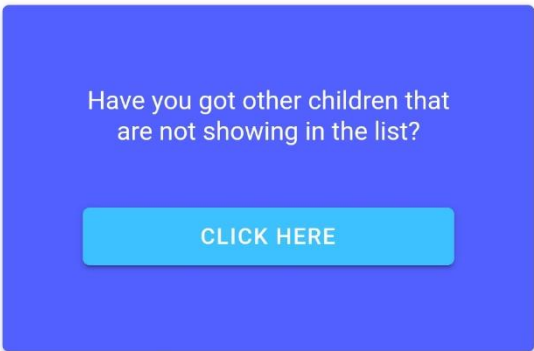

Select the Menu option on the top left of the screen to see the menu as shown on the left.

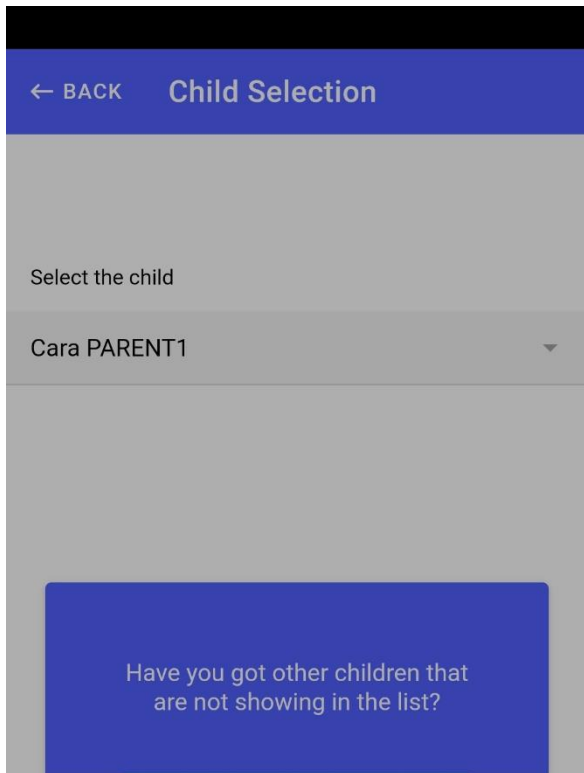

Select the Child icon on the top right to see the screen on the left. This will display the last child accessed, or the first child on the list if you have more than one child.

Select the child

Cara PARENT1 

Click the drop down arrow next to the child's name to see other children that are linked to your profile on the Quick Parent app.

Select which child you want to see details for by pressing on their name.

If all your children are not listed, it may be because that school has not yet started using the Quick Parent App.

You can press on the "Click Here" button to tell us which school your other children attend.
